INDUSTRY LEADER IN
DESIGN-BUILD AQUATIC FACILITIES
WWW.WATERPARKS.CA

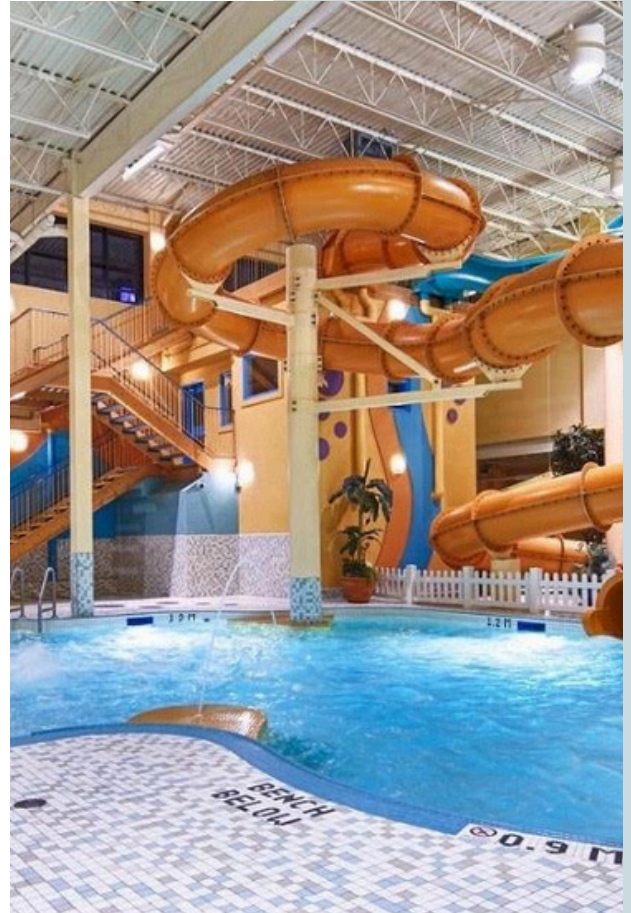

WHO WE ARE

Western Recreation & Development Inc. is a trusted leader in the aquatics industry, proudly Canadian-owned and operated.

With over 35 years of expertise and more than 350 successful design-build aquatic projects completed across Canada, we deliver proven experience and innovative solutions to every project.

Recognizing the need for a low-maintenance, cost-effective alternative to traditional concrete pool construction, we designed and patented the Ecco Pool System™ — a pre-engineered, modular pool system that has been successfully installed nationwide.

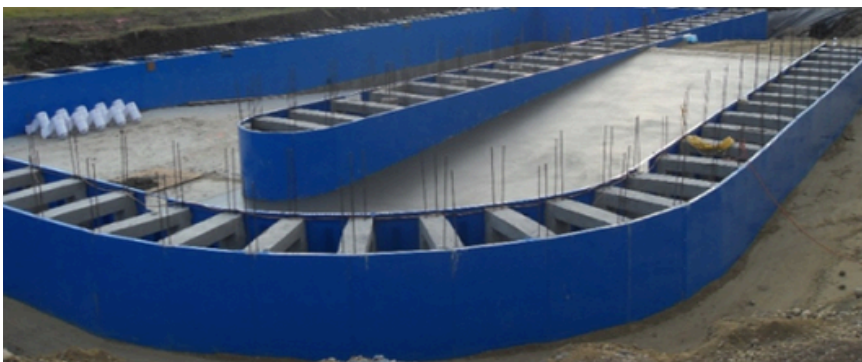

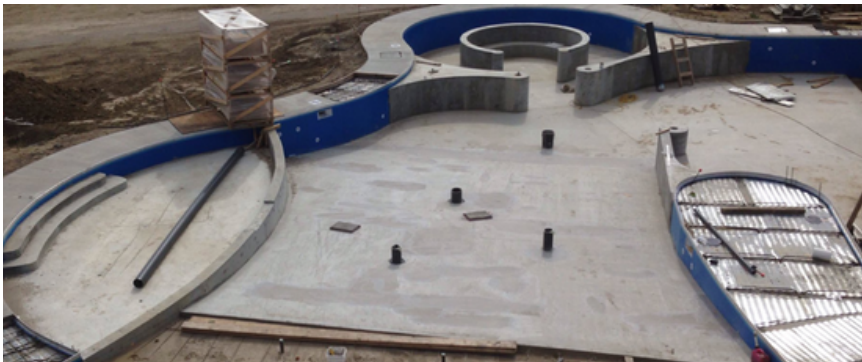

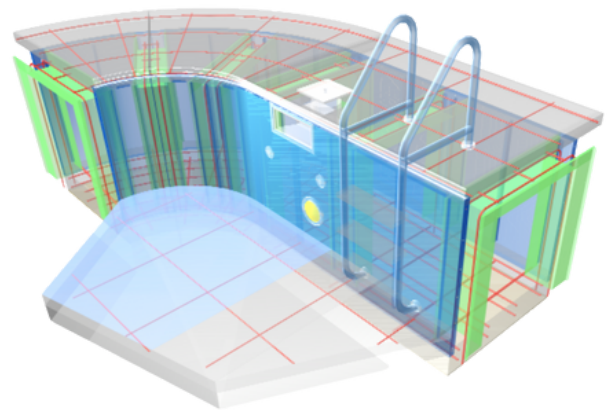

What sets Western Recreation apart is our ability to self-perform all critical aspects of construction, including concrete work, plumbing, mechanical systems, PVC membrane installation, and waterslide installation. By managing every phase in-house, we ensure superior quality control, streamlined efficiency, and full accountability from concept to completion.

ECCO POOL

The Ecco Pool System is a pre-engineered, modular pool system developed, patented, manufactured and proprietary by Western Recreation & Development Inc.

The Ecco Pool is a prefabricated modular steel pool system engineered for exceptional strength, longevity, and ease of maintenance. The structural design features a continuous concrete structure that extends from the deep-end sub-grade footing to the integrated perimeter concrete decking. This solid concrete foundation combined with galvanized, powder-coated steel wall panels, delivers outstanding durability and structural stability while providing a fully accessible perimeter crawl space for maintenance and serviceability. Highly customizable, the Ecco Pool can be tailored to suit a wide range of unique designs and applications.

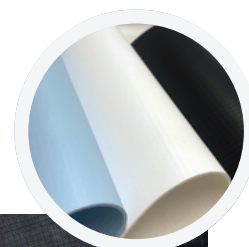

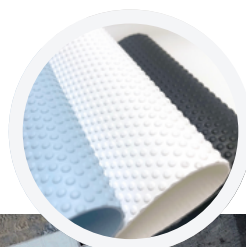

PVC MEMBRANE

Over the past four decades, Western Recreation has installed more than 2 million square feet of PVC pool membrane across North America.

Our exclusive Sundance 3-ply Infinity PVC membrane is proudly manufactured in Canada by Canadian General-Tower (CGT), formulated specifically for Western Recreation. This premium-grade membrane features a bonded acrylic topcoat that resists UV damage and chemical wear, ensuring exceptional durability and long-term performance.

With no underwater transitions and all seams fusion-welded and sealed with color-matched liquid PVC, the result is a smooth, watertight, and visually cohesive finish that's built to last.

EXCLUSIVE

ZERO DEPTH BEACH ENTRY

The Zero Depth Beach Entry features unmatched accessibility — It's perfect for children, seniors, and anyone with mobility challenges. Wheelchair users can roll right in with ease, and families with small kids feel safer and more comfortable.

Incredible Visual Impact — a beach entry instantly elevates the look of your facility making a lasting first impression.

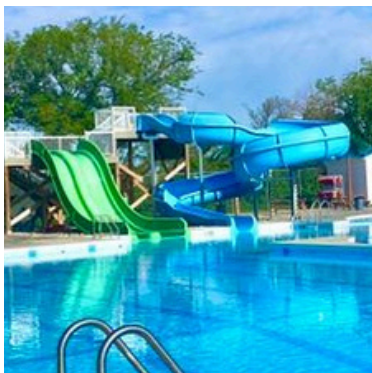

More Fun, More Usability — Shallow water play zones, lounging areas, and splash features become possible with a beach entry, turning your pool into a multifunctional recreation hub.

Safety-First Design — No sudden drop-offs. Just a gentle slope that encourages confidence and safe play, making lifeguard supervision easier too.

WATERSLIDES

Western Recreation is proud to partner with ProSlide Technology Inc. since 1998 to deliver the highest-quality waterslides available to our customers. Proslide is a Canadian designer and manufacturer of water rides and a world leader in water park attractions.

Adding a waterslide is an excellent way to attract guests across a wide range of age groups. Slides can be customized for each unique site, with specific designs tailored to different ages — from the gentle Kiddie River Ride to open and enclosed body slides, and high-thrill speed slides. The slope and style of each slide help determine the appropriate user age group. Waterslides are proven to significantly enhance marketing campaigns, drawing visitors not only locally but also from distant markets. They offer high entertainment value for active swimmers, occupy a medium to large footprint, and deliver strong capacity and usability per square foot, making them a smart investment for any aquatic facility.

SPLASH PADS

Adding a splash pad to a community offers many benefits. Splash pads provide safe, accessible fun for all ages without the need for swimming skills, making them an inclusive recreation option. They are more affordable to build and maintain and typically do not require lifeguards, helping to keep operating costs low. Splash pads also create natural gathering spaces, strengthening community connections and encouraging outdoor activity for healthier lifestyles. Flexible in design, splash pads can be customized to fit a variety of spaces and themes. Additionally, they can boost local economies by increasing property values and attracting visitors, and many modern splash pads use environmentally friendly, water-efficient systems. Overall, a splash pad is a smart, community-building investment that enhances quality of life.

ARMSTRONG, BRITISH COLUMBIA

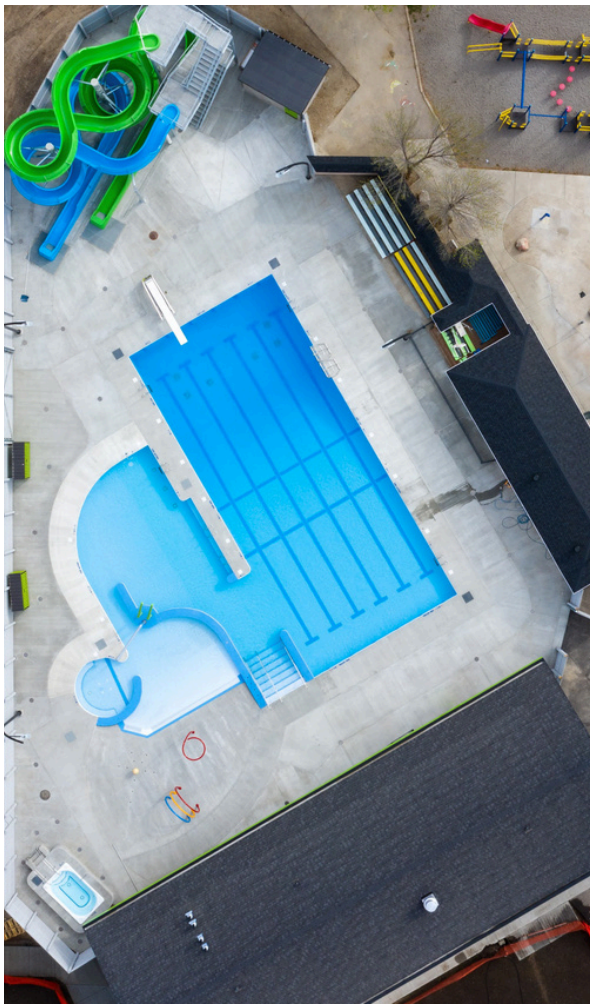

Located in Armstrong, British Columbia, the outdoor swimming pool—designed and built by Western Recreation — delivers a premier aquatic experience for all ages. With a six-lane Junior Olympic lap pool, a leisure pool featuring a water umbrella, spray columns and geysers, a Twister waterslide, separate tot pool and hot tub. An advanced overflow gutter system surrounds the pool's perimeter, ensuring optimal water quality and cleanliness.

VULCAN, ALBERTA

The Vulcan Swimming Pool in Vulcan, Alberta, was designed in partnership with VDA Architecture and constructed by Western Recreation completed in 2021. This modern aquatic facility features a six-lane Junior Olympic pool, a leisure pool with beach entry, a dedicated tot pool area, and an interactive spray deck. Additional amenities include two Twister waterslides and a commercial-grade hot tub, offering a well-rounded experience for visitors of all ages.
